

**After acceptance notifications,  
prepare your artwork for exhibition:**

**PLEASE, NO POSTER FRAMES/SAWTOOTH HANGERS** (see image below). They have no way to hang with the gallery hardware. We may have to call you to pick up your artwork if we have no way to display it.

Use proper hardware, **opposing sides**, in the appropriate location on the back of the artwork, d-rings or strap hangers. Adding a wire across the back is preferred, but not necessary when using proper hardware. **(All artwork is hung using the hardware on both sides of the artwork** – and not hung from the wire across the back.) Plan for proper orientation of the art, we do not want to hang it with the art facing upside down.

For photography, with this type of hardware – when adding a wire across the back -- make an additional quarter sized closed-circular loop in each side of your picture hardware, this allows your picture to work with the gallery hanging hardware. If you use metal frames with a sliding metal hardware – put a pin in the hardware as stated above.

Never use eye screws, they do not function well. Artwork may fall.
